

Dear Friends,

While we look forward to seeing you at the NATA show in Philadelphia, we know that not all of our SPORTSWARE ONLINE family will be making the trip this year and are excited to provide a first look at SportsWare 2.0! For those attending the show, come see us at Booth 1309 to grab your Trauma Shears and register for our AED giveaway!

In this issue:

- SportsWare 2.0 Sneak Peek!
- Hydration Breaks at the World Cup?
- SPORTSWARE ONLINE Mobile Tip of the Month: Symptom Eval
- Insurance Verification: Protect your Institution from unexpected bills!
- Community Spotlight: Tell us Your Stories!

The screenshot shows the SportsWare 2.0 dashboard for user Rich Potash. The dashboard includes a sidebar with navigation options: Home, Inbox, Settings, Recycled, and Log Out. The main content area displays a welcome message, a summary of team health (5 Teams Healthy, 17 Injured, 3 Pending Approvals), and a 'New Athlete' button. Below this, there are four cards showing key metrics: My Rosters/Groups (8 across 214 athletes), Athletes Injured (17, 4 new this week), Profiles Completed (82%, 6% since last month), and Pending Approvals (3 newly joined users). A 'Recently Modified Athletes' table lists Betty Lopez and Christopher Allen, both modified by Rich Potash. An 'Approve Newly Joined' section shows a pending approval for Jordan Avery, Assistant Coach.

SportsWare 2.0!

We're excited to share an early preview of SportsWare 2.0, the next generation of SportsWareOnLine. SportsWare 2.0 builds on the proven foundation of SportsWare while introducing a modernized user experience, faster navigation, improved search, and new browser-friendly features designed to make everyday workflows easier.

Several major improvements include:

- A modernized user experience with faster navigation and improved system response.
- Centralized athlete data for easier access to key information.
- Integrated search tools for athletes, injuries, and related records.
- Expanded data options and improved permission controls.
- Better browser support, including multiple tabs, forward and back buttons, and multiple open SportsWare windows.

If you are attending NATA, stop by for a first look at the future of SportsWare!

Have a suggestion for enhancements? We'd love to hear from you!

Hydration Breaks at the World Cup?

With athletes flooding into venues across North America, there has been a significant focus on acclimating athletes to unfamiliar climes of places like Miami, Mexico City, and Atlanta. In an unprecedented move, hydration breaks have been instituted for 3 minutes every half of play. Is this something we should see implemented further? 👉 [Read the full article here](#)

SPORTSWARE ONLINE Mobile Tip of the Month: Symptom Eval

Looking for ways for athletes to report concussion symptoms without pulling them in to the athletic training room? The Concussion Toolbox add on to SPORTSWARE ONLINE allows athletes to complete a symptom evaluation directly from their mobile device!

Athletes can log in > tap "Your Info" > Evaluations and access the symptom evaluation right on the mobile device.

👉 [Click for more information about the Concussion Toolbox](#)

Insurance Verification: Protecting your Institution from Unexpected Bills!

Avoid unexpected medical bills by verifying athlete insurance ahead of time! Insurance Verification in SPORTSWARE ONLINE will ping your athlete's insurance on a monthly basis and make it easy to dump a report of athletes with lapsed plans.

👉 [Click to view updated instructions](#) OR 👉 [Set a time to discuss adding to your plan!](#)

Community Spotlight - Tell us your Stories!

Sound training and preparedness are two of the hallmarks of an Athletic Trainer, and both came into play when a Texas middle school athlete collapsed during practice. Responding with CPR and an AED, the athlete was able to make a full recovery!

HUMAC NORM - See What You Are Treating

The [HUMAC NORM](#) Isokinetic Test Report makes it easy to see what you are treating so you can treat better. Isokinetic resistance set to the appropriate speed allows the patient to perform a maximum muscle capacity contraction at every point in the ROM. Deficits, see example, are easy to see which makes objective, evidence based treatment protocols possible. [Contact CSMi](#) for more info.

HUMAC BIKE

HUMAC NORM Owners use Isokinetic resistance training to increase strength because research has proven it's the most efficient resistance to build strength. Now the same Isokinetic resistance in the HUMAC NORM is available in the new [HUMAC BIKE](#) by CSMi.

Athletes with lower extremity injuries have a strong side and a weak side - - with the Isokinetic HUMAC BIKE both sides benefit simultaneously by simply pedaling harder. If your goal is to build strength, your athletes should be riding an Isokinetic bike i.e. HUMAC BIKE. Old timers -- think CYBEX FITRON.

Other features: cordless, adjustable crank pedal length, low step through

The best new product feature ideas originate from our Users. If you have a [suggestion or a question](#) please let us know. Thank you for reading. Exercise!

- Rich and Rob
