

Dear Friends,

We are excited to welcome our Athletic Training family back from the Summer and hope that you all were able to spend time enjoying family, friends, and some time away! The start of another school year always brings questions, and the 🖱️ [SPORTSWARE ONLINE Knowledge Base](#) is here to help. Welcome Back!

Quick Treatments Kiosk and Customization

Athletic Trainers document thousands of athlete encounters over the course of an athletic year; wouldn't it be nice if those same athletes could take on some of that documentation? The Quick Treatments Kiosk Add-On allows ATs to set up a check in station for athletes coming to the AT Room for treatment, making it easy athletes to select from a customizable list of Injury and Treatment options. 🖱️ [Book a Meeting to Discuss Setting up or Customizing QT!](#)

Feature Spotlight: Quick Duplicate

The Quick Duplicate feature in SPORTSWARE ONLINE provides athletic trainers with a way to increase the pace of documenting repeat visits. Clicking the double stacked boxes to the left of an athlete's treatment records provides the option to duplicate the treatment, update the coach's report, close out injuries, and write notes, all from one screen!

SPORTSWARE ONLINE Mobile Tip of the Month: Coach's View

Looking to get coaches regular updates without sending daily or weekly emails? SPORTSWARE Mobile provides each coach with easy access to notifications and alerts about their players, color coded status identifiers, as well as emergency contact and insurance information. 🖱️ [Set a Meeting to Discuss Mobile Options](#)

Can't Find an Athlete, Injury, or Treatment? Filters Review

Struggling to find an Injury that you know your documented? Can't find an Athlete who told you they completed their Attachements? Click on the Filter icon to view your listing page in a new light! Filters allow users to segment data based on criteria like Sport, Group, Cleared, and Closed/Open. 🖱️ [Click for more information about filtering data!](#)

HUMAC NORM - See What You Are Treating

The [HUMAC NORM](#) Isokinetic Test Report makes it easy to see what you are treating so you can treat better. Isokinetic resistance set to the appropriate speed allows the patient to perform a maximum muscle capacity contraction at every point in the ROM. Deficits, see example, are easy to see which makes objective, evidence based treatment protocols possible. [Contact CSMi](#) for more info.

The figure shows the HUMAC NORM machine and a sample report. The report includes patient information (Name: Carroll, Karen, DOB: 08/27/2008, Position: Cheerleading, Team: SportsWare College) and test results for knee extension and flexion. The extension graph shows a peak torque of approximately 140 Nm, while the flexion graph shows a peak torque of approximately 100 Nm. The report also includes a 'Short Form Torque vs. Position Report' and a 'Knee Extension/Flexion' graph.

HUMAC BIKE

HUMAC NORM Owners use Isokinetic resistance training to increase strength because research has proven it's the most efficient resistance to build strength. Now the same Isokinetic resistance in the HUMAC NORM is available in the new [HUMAC BIKE](#) by CSMi.

Athletes with lower extremity injuries have a strong side and a weak side - - with the Isokinetic HUMAC BIKE both sides benefit simultaneously by simply pedaling harder. If your goal is to build strength, your athletes should be riding an Isokinetic bike i.e. HUMAC BIKE. Old timers -- think CYBEX FITRON.

Other features: cordless, adjustable crank pedal length, low step through

The best new product feature ideas originate from our Users. If you have a [suggestion or a question](#) please let us know. Thank you for reading. Exercise!
